[A Guide to Refilling the HP Inkjet Cartridges](#)

In today's world, it seems that almost any topic is open for debate. While I was gathering facts for this article, I was quite surprised to find some of the issues I thought were settled are actually still being openly discussed.

Whenever there is paper, there is the need for a printer. Both the professional and the personal areas find a printing device in demand. It is a piece of equipment that allows the easy replicating of a virtual document at anytime. With the numerous brands of printers that are sold in the market these days, many of them have cut back on their prices to provide the buying public a much better alternative. The competition has gotten so tight over the years and it is simple to spot an inexpensive printer.

However, what remains constant in the expensive price slot is the inkjet cartridge. The latter can cost too much especially when it is for the HP printer. It is then the very reason why most users prefer the generic or clone cartridges as well as using the ink refills over the OEM products. Furthermore, HP inkjet cartridges are just one of those many products that can be refilled.

The general truth is that the refilled and the generic cartridges are down by at least half of the price of the original manufacturer's product. Apart from being cheaply priced, they are likewise as durable as the brand new and genuine ones. Since what you have is an inkjet printer, and an HP for that matter, you can be assured that you will get the same quality of print results without spending too much.

A Guide to Refilling the Cartridge

You don't just refill your cartridge as if you are simply going to turn on the faucet. It requires you to carefully read the instructions that come along with the refilling kit manual and be certain that you completely understand every bit of it. Take note of the following as you refill your printer's ink cartridge.

The best time to refill the cartridge is when the ink has not yet been totally drained. Gather your kit, a clear scotch tape, a pair of gloves, and a handful of paper towels. Check if you have purchased the correct ink that matches the type of your cartridge model.

How can you put a limit on learning more? The next section may contain that one little bit of wisdom that changes everything.

With gloves on hand, take out the cartridge from inside the printer. The ink can really be messy so it is best to protect your hand from it. Look for the fill holes. They are placed on top. Pierce it using any sharp object. Squeeze in the cartridge for some pressure and inject the needle from that of the refill bottle. Be careful not to spill the ink or overfill your cartridge.

Clean the injector tools so that the colors will not get mixed up. Also make sure that the ink will not leak. It pays to try blotting the print head with a paper towel.

As soon as you have placed the cartridge back, print something to get the ink working. This is a way of testing if the colors are also working properly.

Overall, the refilling of the cartridge must be done as soon as possible or else the ink will dry up.

The Best Place to Buy

The HP inkjet cartridges are offered in the lowest price online. The online stores have their systematic shipping procedure so there is nothing for you to worry about. Again, make sure that what you purchase is the same compatible ink that your HP printer requires.

Is there really any information about Inkjet that is nonessential? We all see things from different angles, so something relatively insignificant to one may be crucial to another.
